AB - RU2048298 The flexible sheet material with is obtd. by employing a mixt. of latex and a plasticised PVA dispersion as the binder. The insulation material has the following compsn. (wt.%): aluminosilicate and/or silica fibre (30-40); vermiculite (45-60); butadiene-nitrile rubber latex (4.2-14.1); plasticised PVA dispersion or vinylacetate/ethylene copolymer dispersion (0.3-4.5).
- USE - In motor industry, as insulating material for catalytic converters..
- ADVANTAGE - The material increases its vol. by a factor of at least 1.45 after exposure to 800 deg.C and subsequent cooling. Improved resistance to heat and vibration.
- (Dwg.0/0)
IW - FLEXIBLE THERMAL INSULATE SHEET MATERIAL CONTAIN ALUMINO SILICATE FIBRE VERMICULITE BUTADIENE-NITRILE RUBBER LATEX PLASTICISED POLYVINYL ACETATE DISPERSE
IKW - FLEXIBLE THERMAL INSULATE SHEET MATERIAL CONTAIN ALUMINO SILICATE FIBRE VERMICULITE BUTADIENE NITRILE RUBBER LATEX PLASTICISED POLYVINYL ACETATE DISPERSE
